

# SHIPBUILDING

## Grimbergen – Shipbuilding

We act as your constructive partner whether by creating new machinery and equipment for your production facility or by optimizing your existing equipment. Our extensive experience in designing and realising handling equipment, logistic systems and production equipment makes us experts in developing most efficient production facilities within the shipbuilding industry.

Grimbergen takes care of the design, realisation and commissioning of innovative and custom made machinery and logistic systems. On top of that we offer enhanced service & maintenance on these systems. Grimbergen consists of a team of specialists which is ready to pick up different projects regardless the size. This includes for example optimizing a part of your production process by providing consult and designing and delivering equipment, as well as being your only partner for creating your new plant or shipyard.

## Handling equipment

As your partner concerning the design, realisation and maintenance of your handling equipment and machinery for automation purposes in the shipbuilding industry, we help you produce in the best way as possible. With our systems and equipment you will excel your production processes so you will be able to produce in a safe, efficient and sustainable way

## Logistic systems

The building process of any type of ship is a complex logistic process. This means that all systems need to be connected properly. Grimbergen supports you by identifying the bottlenecks in your production process, designing solutions/improvements and realising the designed logistic systems. This results in a more efficient production process with which you will produce high quality products in a safe production environment.

## Quality

Both quality and safety are obviously your and our biggest concerns. This is why we constantly work on improving our own production processes and our products. Not only do our ISO-9001 and VCA++ certifications and the machine building standards reflect our quality policy, but also our growing list of references with companies that demand nothing but the highest quality of their equipment.

## ADVICE

Grimbergen is your advising and supporting sparring partner during both the development of new systems and equipment and the maintenance, continuous improvements, transformation or renovation of existing installations. Our experienced project managers are ready and willing to examine each aspect, each question to come to a grounded solution..

## DESIGN

The creative and experienced team of designers and engineers within the Grimbergen team will translate all your wishes and ideas into a functional design. The whole process of course in close cooperation with you, your employees involved and our expert project team.

In each final design of course the questions as safety, sustainability and maintenance will be taken into account. Guaranties on the usability of the design come from the control of each engineering discipline which is necessary for the achievement of the total design. Think about the in house accommodation of e.g. mechanical, electrical and operating-technical engineers, who also draw knowledge from the practice experience from our own production, maintenance and service environment.

## REALISATION

The manufacturing, assembly, and putting in operation of your equipment and systems will also be realised by our own Grimbergen specialists (the final parts at your location). Herewith we carefully monitor and control the agreed quality and delivery time of the systems with which you want to be operational as soon as possible. Additional advantages are that herewith the complete knowledge of each detail is in-house available and therefore a quick and flexible answer to upcoming questions can be given.

## SERVICE

You want to gain the maximum out of your machinery and equipment and both work in a safe, efficient and sustainable way. To let your systems and processes perform optimally and to improve continuously you need an experienced, reliable and flexible team in the field of service and maintenance management. Grimbergen takes care of this by offering a high quality and complete service package so your machines and production plants can function optimally and to keep insight in and oversight of the condition of the equipment. On basis of your specific wishes and demands the support will be composed to a tailor-made service package which precisely fits your needs and working processes.

## About us

In 1945 the company was founded as a smith's working-place by Mr Henk Grimbergen. Rapidly the activities were extended by fulfilling the need for machinery and equipment in the surrounding industries. In the course of years Grimbergen evolved into an internationally operating player under the lead of the second generation Freek Grimbergen in the field of tailor-made machinery and overall solutions in the form of complete production systems for the heavy industry. Meanwhile the grandson of the founder (Henk-Jan) took over the lead, but still with the course focused on client specific machines and logistic systems and always faithful to the philosophy which was held high during the past 3 generations: come to the best possible solutions in close cooperation with the clients to realise an optimal production plant with continuous improvements.

Besides the history and the steady course, the greatest value of the company is the extraordinary motivated team of people with year-long experiences in all possible disciplines, guts and especially innovative capacities. Always with their focus on the best result for our clients.

## "The Grimbergen Philosophy"

**Why?** Our clients continuously work on the production of new and improved products in the most safe, efficient and sustainable way possible.

**How?** For you as our client Grimbergen is your partner during the complete lifespan of your production facilities. In close cooperation with you we search and realise the best possible solutions for an optimal performance, but also for continuous improvements of your production systems.

**What?** Grimbergen designs, realises and installs innovative tailor-made machines and logistic systems and offers a full service and maintenance package on these systems.
