

Service & Maintenance

Your goal is to get the maximum out of your production. In the mean time you want to produce in a **Safe**, **Efficient** and **Durable** way.

To maintain the performance of your manufacturing plant at an optimal level while continuously improving, you need a professional, reliable and flexible team as a partner for maintenance and maintenance management.

Grimbergen offers a high quality and complete service package for your equipment and production systems. With Grimbergen as your partner your equipment and production systems can function in the most optimal way. Grimbergen also provides insight and overview over the current state of your production equipment.

Based on your specific needs and requirements, Grimbergen provides a customized service package in line with your needs and your production processes.

- 24/7 direct support through personal contact with our software engineers.
- A team of specialists to provide every means of support possible; field service engineers, E/M engineers, technical supervisors
- Quick delivery of spare parts and own production facilities where custom parts can be produced.
- On-site support like preventive maintenance, inspections, repair and maintenance / performance scans.
- Establishing maintenance plans and supervising / coordinating your maintenance management
- Monitoring and analytics of the machine performance to produce substantiated advice on maintenance, renovation or replacement of (parts of) your machines (OEE)
- Machine adoption and Lifecycle support
- Training of your technicians and operators.

You care for your products. We care for your fleet.
